

Sourav Pal

CS PhD Student at UW-Madison

spal9@wisc.edu

<https://sourav-roni.github.io>

Education

University of Wisconsin-Madison

Aug 2019 - Present

PhD in Computer Sciences

CGPA: 4.0/4.0

Indian Institute of Technology Kharagpur, India

Jul 2014 - May 2018

B.Tech. (Hons.) in Computer Science and Engineering

CGPA: 9.33/10.0

Research Interests

I am interested in solving challenging problems related to Machine Learning and Computer Vision.

Papers

Work Experience

Adobe Inc.

Jul'18 - Jul'19

Member of Technical Staff, Document Cloud - Adobe Acrobat

- Worked on prototyping a new feature for the Adobe Acrobat Reader. This feature enabled providing intelligent insights around conversations. To this end we used Machine Learning techniques, along with some logical heuristics.
The prototype was declared as the winner of the Adobe Document Cloud HackWeek in Noida.
- Responsible for migration of the build system of the Adobe Acrobat Reader android application from the ndk-build system, to the CMake build system.
- Worked on voice first documents to provide intelligence to the Acrobat Reader and integrating the application with Amazon Alexa.

Internships

Adobe Research, BigData Experience Lab

May'17 - Jul'17

Research Intern

Advisor: Dr. Ritwik Sinha

- Worked on analysis and improvement of mobile user interfaces using eye gaze tracking.
- Used computer vision techniques to develop deep learning models to predict visual saliency of mobile interfaces.
- Developed metrics for evaluating saliency on a new kind of data set, which was collected by deploying an application in Amazon Mechanical Turk.

Presented the work as a talk at the Adobe Tech Summit 2019 (Feb'3-7), San Francisco.

National Digital Library of India, MHRD Government of India.

May'16 - Jul'16

Summer Intern

Advisor: Prof. Partha Pratim Das

- Used dynamic instrumentation for debugging and analysis of multithreaded applications.
- Designed and implemented several algorithms to create tools for data-race detection, deadlock detection, thread-

model detection.

- Integrated the above tools with the popular IDE Eclipse as Plug-ins and with Code-blocks as user-defined tools.

Academic Projects

Independent Study, UW-Madison

Sep'19 - Present

Advisor: Prof. Xiaojin (Jerry) Zhu

I am currently working on topics related to machine teaching, reinforcement learning.

Bachelor's Thesis, Indian Institute of Technology Kharagpur

Jul'17 - May'18

Advisor: Prof. Pabitra Mitra

The goal of the work was to use **Visual Attention** to enhance performance of **Autonomous Vehicles**. The first method proposed a supervised learning approach in which we collected eye-gaze data for the task of driving and used this to train a model for predicting the attention map. The second method described an unsupervised approach where we trained a model to learn to predict attention as it learns to drive a car. The results were conclusive of the fact that incorporation of visual saliency in the autonomous driving agent is capable of improving performance.

The project was selected by the Department of Computer Science & Engineering, IIT Kharagpur for Patent Filing

Artistic Rendering of Images, Machine Learning Term Project

Aug'16 - Nov'16

Advisor: Prof. Pabitra Mitra

Worked on separation of style and content of images and subsequent application of a set of styles to an input image. The solution was first implemented using bi-linear models and then with Convolutional Neural Networks. The CNN model was further extended for doodles and videos.

Detection and Classification of Multiple Objects in an Image

Dec 2017

SMARTathon 2017

Developed an end to end system, which given an image could detect multiple objects and classify them. Proposed novel techniques to improve performance of existing systems. These included an image inpainting approach to better classify overlapping objects, a recursive algorithm which enabled detection and classification of minute objects in an image. Finally confidence scores and correlation between image labels were used to output the most suitable object classes.

Object Segmentation in Images, Image Processing Term Project

Sep'17 - Oct'17

Advisor: Prof. Partha Pratim Das

Worked on detecting the salient boundaries in The Berkeley Segmentation Dataset. Developed an approach based on histogram statistics after initial pre-processing of the original three channel input. The results were comparable to the human annotations.

Deep Learning in opinion detection, Natural Language Processing Term Project

Aug'17-Nov'17

Advisor: Prof. Niloy Ganguly and Mr. Ankan Mullick

Used deep learning techniques to develop models to detect and categorize diverse opinionated sentences from within online news articles, both in general and event specific datasets. Implemented LSTM and CNN based models; used GloVe embedding word vectors and dependency based word embedding for training on MPQA and Yahoo datasets. Also, studied how the sentiment varies according to the opinion fraction in an article.

JuiceLoc, Smart-phone Computing and Applications Term Project

Aug'17-Nov'17

Advisor: Prof. Bivas Mitra

Worked on crowd sourced mobile phone charging point locator in busy locations based on magnetic field strength and WiFi signal strength variations. Developed a neural network model that generates indoor location of available charging stations based on charging patterns of other users.

TinyC Compiler, Compilers Term Project

Jul'16-Nov'16

Advisor: Prof. Partha Pratim Das and Prof. Pralay Mitra

Developed a compiler for a subset of C language. Lexer and parser were built using flex and bison utilities.

Transport Company Computerization Software, Software Engineering Term Project

Mar'16-Apr'16

Advisor: Prof. Partha Pratim Das

Developed a system which can automatically handle the logistics of a transportation company. The system was developed using C++ and MySQL.

Other academic projects, are present in my [Github account](#).

Academic Achievements

- Secured an **All India Rank(AIR) of 411 in JEE Main 2014** out of 1.5 million candidates.
- Secured a rank of **51 in WBJEEM 2014** out of 1,00,000 candidates.

Technical Skills

Programming Languages:

- **Proficient:** Python, C, C++
- **Intermediate:** HTML, Bash, Verilog(HDL), L^AT_EX, Matlab, Julia

Tools: PyTorch, Keras, TensorFlow, Caffe, Numpy, Scikit-learn, OpenCV, Weka, NLTK, Git, CMake

(* Ongoing courses)

Teaching Experience

- Teaching Assistant for Data Programming 1 (CS220) Spring 2020 at UW-Madison
- Teaching Assistant for Data Programming 1 (CS301) Fall 2019 at UW-Madison

Positions of Responsibility

- Served as **School Captain** of The Assembly of God Church School, Purulia. Successfully conducted all student activities during the academic year.
- Served as the **Mentor** of a group of six first year undergraduate students for a period of two years from 2016-2018 at IIT Kharagpur.

Extra Curricular Activities

- Active member of **National Service Scheme(NSS)**. Awarded **Certificate of Recognition** for two years of extraordinary social service.
- One of the 10 teams in India to participate in **SMARTathon India 2017** organized jointly by **Samsung** and **FIIT IIT Delhi**.
- Emerged as **Runners-up at State Level Inter-school Quiz Competition**
